Professional Summary

Motivated Computer Science graduate with hands-on experience in AI-assisted development, NLP, machine learning pipelines, and full-stack backend engineering. Proficient in Python, JavaScript, and SQL, with practical exposure to LLMs, prompt engineering, and REST API design. Experienced in building real-world production systems and passionate about developing intelligent agentic workflows, conversational AI, and GenAI-powered applications at the intersection of enterprise automation and modern AI infrastructure.

SKILLS

- Programming Languages: Python, JavaScript, SQL, Java, PHP
- AI / ML Stack: LLMs, Prompt Engineering, RAG (conceptual), NLP pipelines, Scikit-learn, Pandas, NumPy, Computer Vision (CNN, image classification), Data Annotation, Roboflow
- Generative AI Tools: GitHub Copilot, Claude API, ChatGPT, Claude-assisted development, Generative AI concepts
- Backend APIs: FastAPI (learning), Node.js, Laravel 10/11, REST APIs, AJAX, Spring (basic), Hibernate (basic)
- Databases: MySQL, MongoDB, PostgreSQL (familiar)
- DevOps & Cloud: Docker (basic), Linux, Git/GitHub, Postman, Tomcat, AWS (familiar)
- Frontend: React.js, HTML5, CSS3, JavaScript, SortableJS
- Soft Skills: Communication, Time Management, Teamwork, Leadership, Analytical Thinking

WORK EXPERIENCE

FullStack Web Developer Intern, Damodar IT Solutions, Mangalore Nov 2025 – Apr 2026

Recruit & HR Management Module (Laravel, MySQL, JavaScript)

- Built a full Job Management system — create, edit, publish and draft job postings with rich text descriptions, salary range, deadlines and job type
- Designed a dynamic Hiring Pipeline system where each job gets its own pipeline with drag-and-drop stage reordering using SortableJS
- Built Pipeline Templates (Standard, Engineering, Executive, Internship) that auto-populate stages when creating a job, with full CRUD for templates and stages
- Implemented a Recruit Settings panel (offcanvas) to manage pipeline templates and candidate statuses in real time without page reload
- Built Candidate Application tracking with status management and pipeline stage movement
- All interactions are AJAX-driven — no page reloads for stage edits, reordering, template creation or status updates
- Used Service layer architecture (JobService) to keep controllers thin and business logic separated
- Worked on a live production project — code was actively deployed to a live server used by real users
- Managed source control using Git & GitHub — regularly pushed features to remote branches, raised pull requests and resolved merge conflicts during team collaboration

Software Engineer intern, X-workZ – Rajanjinagar, Bengaluru

Feb 2025 – June 2025

- Learning Java technologies, including Basic of Spring, Hibernate, and RESTful APIs
- Gaining hands-on experience in software development, debugging, and testing

Social Work Intern, Speak-Up World Foundation, Remote

Jun 2022 – Jul 2022

- Developed adaptability and communication skills through diverse tasks

- Time management by balancing academic and internship responsibilities

Projects

Ration Card Management System

[GitHub](#)

- Designed a web-based system for managing ration card records
- Developed a secure backend using PHP and MySQL for data processing

Brain Tumor Detection and Emotion Detection

[GitHub](#)

- Developed ML models for facial emotion recognition and brain tumor detection from images
- Preprocessed datasets using Roboflow to improve accuracy and classification performance

Real Estate Web Project

[GitHub](#)

- Developed a full-stack real estate web application using Laravel (MVC) with AJAX-based CRUD operations
- Implemented server-side validation, role-based access control, and authentication
- Integrated dynamic DataTables with Excel/PDF export, search, and pagination

Education

Canara Engineering College

Dec 2021 – May 2025

- CGPA : 8.19
- **Degree:** Bachelor of Engineering in Computer Science

Certifications

How to Deal With Tough Times | Problem Solving Skills
